

Data Center Services

STRATEGIC PLANNING FOR TOMORROW'S DATA CENTERS

FEATURES AT A GLANCE

- Assist in Data Center Migration and Consolidation
- Strengthen Your Disaster Recovery Plan
- Eliminate Unexpected Disruption Cost

SERVICE OVERVIEW

You have been charged with delivering superior services to your business, implementing a 'green' strategy to reduce energy usage, protecting data from outside threats as well as internal risks and to do it all with a smaller budget than last year. You need an efficient data center, a robust business continuity plan and a nimble disaster recovery strategy to ensure the security of your business operations in the event of an unforeseen disruption.

Verari's Data Center Services are designed to help you stay on top of your ever-evolving role and plethora of projects. Our work illustrates the success and reliability of our strategic planning and implementation expertise and proprietary project management methodology because today's data center is not just a hub of technology; it's the heart of the business.

Our Data Center Services Include:

- Data Center Migrations
- Data Center Consolidations
- Disaster Recovery
- Business Continuity

Our Data Center Services Framework

Appropriate risk mitigation is essential for a successful migration or consolidation. Having a detailed understanding of when, where and how problems can arise puts you in control of how to proactively mitigate risk. To achieve this, Verari employs its proprietary Data Center Services Framework (DCSF): a modular approach keeping people, processes, equipment and information

aligned with your business objectives. The eight core disciplines of the DCSF are designed around the natural progression of major data center activities.

Beyond understanding the technical tasks to be accomplished, you must be able to plan and execute them at the right time, the right place and with the right people, while never taking your eye off the business.

Benefits of our Data Center Services

Optimization of Assets

According to Gartner, most IT environments perform at only 20% utilization. Increasing that to 40% through smart design will double your abilities without increasing your costs. You invested in all that technology, so now it's time to make it work for you and enjoy the full benefits of a streamlined, optimized environment.

Lower Costs

An efficient environment means using fewer resources without a loss in performance. Employing fewer resources translates into fewer maintenance contracts, delayed capital expenditures and less energy usage. All of this results in lower costs to the consumer.

Risk Reduction

Efficient data management in the data center requires a solid data classification and archiving system that offers, protects and stores valuable business information and ensures compliance with federal regulations. Our experienced

consultants will assess, design and implement appropriate plans and processes to minimize your exposure to risk.

Improved Service Levels

Aligning IT capabilities with business goals transforms your data center environment to a service oriented infrastructure. By establishing clear service level agreements and open communication, you provide reliable, efficient and superior services at an affordable cost.

Why Verari is Uniquely Qualified to Help

- We offer end-to-end solutions: consulting, implementation and ongoing managed services (support).
- We are focused on data center infrastructure.
- We facilitate sessions with all stakeholders and decision-makers to accelerate the process.
- We develop unique intellectual property and tools to analyze and integrate required data.
- Verari's services provide measurable ROI for cost, risk and customer service.

Through innovation, Verari Technologies has developed and implemented equipment and procedures that achieve more by using less. Verari has made environmental responsibility a manufacturing priority by increasing the overall energy effectiveness of all our product lines while keeping the vision of the green data center in mind. Verari Technologies, through voluntary action, is committed to the reduction of e-waste utilized in the production of computers and other technological devices.

SERVICES AND SUPPORT

The mission of our Product Service and Support Team is to “Build and Preserve Customer Loyalty”. To that end, our Technical Support and Professional Services staff are experienced industry veterans with relevant industry and Verari Technologies product certifications. Our incident tracking system triggers notifications to both management and senior technical support staff through automated time based alerts and escalation, ensuring timely action and resolution of service requests 24/7.

ABOUT VERARI TECHNOLOGIES

Verari Technologies, Inc. is the premier developer of scale-out blade-based computing and storage platforms for Cloud, Web 2.0, and the global enterprise. Verari provides scale-out solutions for the world’s largest data centers that reduce power and cooling demands while achieving the best density, availability, and energy efficiency for the highest total value of ownership. Organizations such as Virgin America, Morgan Stanley, Wachovia, Microsoft, Qualcomm, Johns Hopkins, EMC, CGGVeritas, Petrobras, Harris, Lockheed Martin, Northrop Grumman, and Sony Imageworks, as well as top universities and research institutions worldwide, are among the customers who have chosen Verari Technologies’ award-winning containerized data centers and high density blade-based platforms.
